The Paris Agreement on Climate Change is a legally binding international treaty on climate change. The agreement was adopted by 196 Parties at the 21st Conference of the Parties of the UNFCCC in Paris and entered into force on 4 November 2016.

The Paris Agreement's long-term goal is to keep the increase in global average temperature to well below 2 degrees Celsius above pre-industrial levels, and to pursue efforts to limit the increase to 1.5 degrees Celsius, recognizing that this would significantly reduce the risks and impacts of climate change.

The Agreement sets out a number of commitments that Parties have agreed to undertake to achieve this goal, including:

- To prepare, communicate, and maintain successive nationally determined contributions (NDCs) that it intends to achieve. These NDCs will represent a progression over time, and will reflect the Party's highest possible ambition.
- To undertake and communicate ambitious efforts to reduce emissions, including through the development of long-term low greenhouse gas emission development strategies.
- To cooperate in taking action to address climate change, including through the provision of financial resources and the transfer of technology.
- To strengthen adaptation actions, including through the development of national adaptation plans.
- To increase public awareness of climate change and its effects.
- To promote sustainable lifestyles and sustainable patterns of consumption and production.

The Paris Agreement is a landmark agreement that has the potential to make a significant contribution to the fight against climate change. However, it is important to remember that the Agreement is only a framework. It is up to each Party to implement the Agreement in a way that is consistent with its national circumstances and priorities.

Key Features of the Paris Agreement

The Paris Agreement has a number of key features that distinguish it from previous climate agreements, including:

- **Legally binding:** The Paris Agreement is the first legally binding international agreement on climate change. This means that Parties are legally obligated to implement the Agreement's provisions.
- **Ambitious goals:** The Paris Agreement's goal of keeping the increase in global average temperature to well below 2 degrees Celsius, and to pursue efforts to limit the increase to 1.5 degrees Celsius, is more ambitious than any previous climate agreement.
- **Nationally determined contributions (NDCs):** The Paris Agreement requires Parties to prepare, communicate, and maintain successive NDCs. These NDCs will represent a progression over time, and will reflect the Party's highest possible ambition.
- **Global stocktake:** The Paris Agreement establishes a global stocktake process that will take place every five years. The global stocktake will assess the collective progress towards achieving the Agreement's goals, and will inform future NDCs.

Challenges to Implementing the Paris Agreement

There are a number of challenges to implementing the Paris Agreement, including:

- **Cost:** The cost of implementing the Paris Agreement is estimated to be in the trillions of dollars. This is a significant challenge, especially for developing countries.

- **Technology:** The transition to a low-carbon economy will require significant technological innovation. This will be a challenge for both developed and developing countries.
- **Political will:** Implementing the Paris Agreement will require strong political will from all Parties. This can be difficult to achieve, especially in the face of other priorities.

The Paris Agreement on Climate Change is a landmark agreement that has the potential to make a significant contribution to the fight against climate change. However, there are a number of challenges to implementing the Agreement. It will be important for all Parties to work together to overcome these challenges and to ensure that the Agreement is fully implemented.
